EDUCATION

University of California - Santa Cruz

Santa Cruz, California

Bachelor's of Science in Computer Science: Game Design

- **Coursework:** Data Structures & Algorithms, Game AI, Artificial Intelligence, Game Development Patterns, Computer Systems, Game Technologies, Rapid Prototyping

EXPERIENCE

Nexus Games Inc.

Remote

Game Developer Intern

June 2026 - August 2026

- Collaborated in a small team to architect and deploy a multiplayer mod for the title *Polar Winds* using TypeScript.
- Led a cross-functional sub-team of four peers where I distributed tasks, reviewed team code, and made sure we are all on our tasks.
- Delivered a fully playable multiplayer experience that is optimized and finished.

University of California, Santa Cruz

Santa Cruz, California

Undergraduate Student Researcher

June 2025 - September 2025

- Developed an LLM-assisted tileset grouping tool to automate the identification of compatible game assets, reducing manual world-building time.
- Designed prompt and evaluation workflows to infer semantic relationships between visual assets.
- Refactored codebase into modular components improving maintainability.

Alan AI

Sunnyvale, California

Engineer Intern

March 2022 - September 2022

- Integrated a voice assistant into classic video games using Node.js and JavaScript to improve player accessibility.
- Collaborated with a development team to implement voice driven game interactions and controls.
- Demonstrated technical architecture and live gameplay features to an audience of 20+ industry professionals.

PROJECTS

Riftshot

Solo Developer

- Engineered a standalone, fast-paced multiplayer game in Unity, writing clean and efficient C# scripts.
- Implemented client-server architecture and built a working server in Unity.
- Successfully stress-tested and validated network stability during a live 8-player peer-to-peer playtest session.

Project: Slime Roller

Level Designer & Programmer

- Programmed puzzle-escape mechanics using Unity's physics engine, designing custom collision handling routines.
- Constructed interactive environments utilizing grid-based layouts and trigger volumes to script level progression.
- Worked closely with a team of 6 developers to coordinate programming and level design, successfully completing the project in just 3 days.

Arcane Ascent

Lead Developer

- Spearheaded the technical architecture, design patterns, and combat systems for a 2D game in Godot.
- Programmed gameplay elements, including the combat system, spells, and enemies.
- Built a robust, persistent serialization system for custom user keybindings and audio configurations using local file I/O.

SKILLS

Programming: C#, C++, Python, JavaScript/TypeScript, Node.js, React.js

Engines: Unity, Godot, Unreal Engine 5, Phaser

Technical/Programmatic: Artificial Intelligence, Data Structures and Algorithms, Collision Handling, Game AI

Platforms: Linux, MacOS, Windows

Tools: Git, GitHub, Blender, Tiled, VSCode
